

Customers and Staff benefit from clear communication.  
Hearing aid wearers benefit from the use of a transport induction loop system.

Being hard of hearing can make people feel isolated. Even simple every day things like getting on a bus or into a taxi can become a real task. Wearing a hearing aid can help but it amplifies all sounds to the same level. In busy and noisy situations this is more of a hindrance than a help with frequent misunderstandings and frustration.

The **Transport Induction Loop** makes interaction with hard of hearing customers a more relaxed and pleasant experience, reducing the need to raise voices or repeat things. With two inputs it is ideal for communication between passenger and driver (taxi) and for running guide commentary (bus). This in turn makes the experience for hard of

hearing customers more enjoyable and more likely to return, again and again.

Gain a new following of satisfied customers with the **Transport Induction Loop**.
